Still Here: Stage Card

AI offers possible words. The person decides what to say.

1. PARTNER (talk only)

Stand close. Speak normally. One sentence. A follow-up within ~20 s merges into the same question. Don't count aloud.

BEAT 1 (0:15)
"Are you coming to dinner tonight?"

BEAT 2 (0:50) AFTER THE VOICE STOPS
"What time should we meet?"

BEAT 3 (1:15) THEN SILENT
"Let's skip dinner and just stay in. Okay?"

BEAT 4 (1:55) SOMEONE LEANS IN
"Can I get you anything to drink?"

BEAT 5 (2:25) OPEN-ENDED
"How was your day?"

Open-ended questions can take up to ~8 s. Stay silent and wait.

Noisy hall or wrong transcript? Helper taps Stop listening. Type your line under "Type or record instead".

2. OPERATOR (face only)

Eyebrows up ½ s	NEXT
KEEP eyebrows up	keeps moving (step / 0.6 s). Relax = stop
Jaw drop 0.4-1.5 s, close	BACK one
Long blink (~1 s)	SELECT & speak
Long blink while speaking	STOP
Normal blinks	nothing

BEAT 1
Wait for the replies (top is lit). One long blink.

BEAT 2
One raise = one step to #2. Long blink.

BEAT 3
Raise ____x to Guide my response, blink. Raise ____x to Disagree, blink. Blink to speak.

BEAT 4
Long blink on top suggestion. Ignore the second face.

BEAT 5 (OTHER WAYS)
Hold brows up to "Other ways to answer", relax, blink. Pick a direction (Rough day), blink; pick a reply, blink.

Face lost / Paused: look back, long blink on Resume. Missed raise, jaw drop or blink: once more, slower. Max twice. Talking and yawns won't trigger Back.

3. HELPER / IF IT BREAKS

T-5 CHECK

- ☐ Volume up, silent mode off
- ☐ App open, ready screen
- ☐ Tap Start with saved calibration
- ☐ On the Mac: `node scripts/smoke-deployed.mjs` = 6/6 PASS

No suggestions after ~8 s	Check Wi-Fi. Tap Pause and type, or None of these.
No sound	Volume / silent switch. More tools, Controls, basic voice.
Noisy room	Stop listening, then type the partner line.
Gestures flaky	Tap answers directly (touch works everywhere).
App crash	Reopen app. Else Safari private tab: https://api-production-18038.up.railway.app + code from the Mac (projector off): `cut -d= -f2 .env.railway.local`

Switch, then say what happened. Never show or say the code.

Engineering prototype. Not tested with AAC users. Don't say: instant, first, faster than typing, offline, clinically validated.
